### **LX-1375 Diesel Transfer Pump Kit**

*8 GPM, 12V DC Motor*

**Fort Mill, SC** - The LX-1375 is a smooth operating, high performance, diesel transfer pump kit. It has a high strength cast-iron construction for exceptional durability. The lightweight and compact design is ideal for transferring diesel, light oils and kerosene. The self-priming pump with direct transmission and inner recirculation works to extend the pump life and preventing over-pressurization. Designed with a continuous 30-minute duty cycle and a self-priming mechanism to prevent premature motor and pump damage due to dry operation.

The smooth operating, high performance 3600 RPM, 12V DC motor efficiently transfers 8 gallons per minute (30L/minute). The working pressure is 14.5 PSI (1 Bar). The LX-1375 features a by-pass valve for motor protection and strong seals for leak protection. The pump kit comes with 3/4" aluminum nozzle and 13 ft. fuel hose. The 6-1/2 ft. battery cable with clamps is included for user convenience. A 2" threaded bung coupling barrel or tank mounting is also included with the pump.

Note: Not to be used for dispensing gasoline, alcohol, waste vegetable oil or biodiesel fuels.

### **About Lumax**

Lumax has proudly served the professional Automotive, Industrial, Agricultural, Hardware, and Retail Markets with quality lubrication products for over two decades. As an industry leader, Lumax continues to grow by building its relationships and business with a strong foundation in World-Class products, customer service, and value.
